Paulo Vieira Silva

DevOps & Platform Engineer | IT Operations

Vila Velha, Espírito Santo, Brazil | Remote, US hours
paulo_sng@hotmail.com | linkedin.com/in/paulo-vieira-phv | github.com/vieiraphv2 | vieiraphv2.github.io

SUMMARY

DevOps and platform engineer with 10+ years in IT.

My strength is finding out what is actually happening and working the solution, regardless of area, tool, complexity or size of the task.

That range comes from a career spanning the full width of technology operations, from network operations for global mining and ERP support to identity, security, cloud infrastructure, data platforms and internal product engineering.

The last twelve months, in numbers:

- Over $600k/year in cloud savings identified and delivered, using AI to build internal tools, systems and processes.
- Snowflake to BigQuery migration: 1.4 TB across 33 databases with no service interruption and ~35% lower compute cost; 30+ Tableau reports with 4,000+ Snowflake-specific SQL queries migrated.
- Salesforce Cases replaced by a support platform built in 13 days, now carrying 65,003 migrated tickets.
- Production Kubernetes bill cut by two-thirds, with zero incidents.

What the numbers do not show: I document what I build, teach the tools to whoever needs them, and leave every system easier to run than I found it. The growth of the team around me is part of the deliverable.

PROFESSIONAL EXPERIENCE

DevOps Engineer | Smarter Sorting
Jul 2025 - Present | Boulder, Colorado, US | Remote | Full-time

Own cloud infrastructure, the data platform and internal products at a compliance-AI SaaS company, as its only platform engineer.

- Moved the company's data warehouse from Snowflake to BigQuery with zero downtime and ~35% lower compute cost, as the only engineer on the project: 1.4 TB across 33 databases and 30+ customer-facing Tableau reports (4,000+ Snowflake-specific queries migrated), with the cutover coordinated with every data-owning team. Found and fixed years of silently wrong data in the legacy ingestion pipeline along the way.
- Converted a customer executive Tableau dashboard in about 15 minutes with the migration tooling I built: a schema-aware SQL translator, a one-click workbook converter and a schema browser over 5,400 tables.
- Replaced Salesforce Cases with an in-house support platform built in 13 days and live eight days before the Salesforce shutdown: email-to-ticket intake, public help center, knowledge base, role-based access and attachments, with 65,003 tickets and 145,464 messages migrated.
- Identified and delivered over $600k/year in Google Cloud savings across BigQuery, GKE, Cloud SQL and vendor contracts, including a BigQuery misconfiguration costing ~$38,000/month, fixed and verified against the billing export (98.4% reduction).
- Cut both GKE clusters from $19,574/month to save ~$160k/year, the production bill down two-thirds, with no downtime or incidents: right-sized dozens of services, retired 38 dead ones with owner sign-off, halved the production node count (18 to 9) one node at a time, moved staging to Spot capacity and closed with a one-year committed-use agreement.
- Designed, built and validated a self-managed Elasticsearch platform on GKE to replace about $240k/year of managed Elasticsearch spend at a projected $20k/year: regional cluster with infrastructure as code, SSO, snapshots and alerting, replicated from the four live Elastic Cloud deployments (1.3 TB). Passed the data owners' tests, with 1,055 replayed queries matching the paid service on keyword search; vector quantization made one embedding index 40x faster on a third of the disk. Production cutover still ahead.
- Led the move of the company website from Webflow to Google Cloud, built and cut over in one day, one day before the target launch date: Terraform-managed production and staging projects, Cloud Run behind a global HTTPS load balancer with managed TLS, keyless CI/CD, and a low-TTL DNS cutover with a documented rollback.
- Replaced third-party data replication with in-house pipelines: a Python ETL on Cloud Run syncing 196 Salesforce objects daily, Stripe ingestion into BigQuery, and Datastream change data capture from four database environments.
- Built a multi-tenant file portal with a public API in two days after a national retailer refused SFTP, Dropbox and Drive (10,000 API calls in a single client run), and a read-only database access service that grants access without distributing credentials.
- Fixed months of failing production restore tests: traced them to 5.5 TB of write-ahead logs held by two dead replication slots, completed the first successful restore (407 GB) and put point-in-time recovery, automated restore tests and WAL alerts on every production instance.
- Automated the biweekly security log review with a Cloud Run job that reads Cloud Armor, firewall, database and Auth0 logs and files its own Jira tickets.
- Resolved production data incidents for enterprise retail customers, including a business-critical reporting dashboard restored within 5 hours and hazardous-materials data corrected in a national retailer's logistics feed.
- Wrote the company standard for programmatic AI access, replacing static API keys with Workload Identity Federation, and added automated AI review of failed CI builds.

Skills: Google Cloud Platform, Kubernetes, TypeScript, FinOps, Disaster recovery, Incident response, AI agents

IT Consultant | Pareto AI
Apr 2026 - Oct 2026 | Remote | Contract

IT lead for an AI data company with a corporate team and an external expert workforce of about 1,000 accounts across seven Google Workspace tenants. Reported to the Head of People and owned IT end to end: security, identity, devices, vendors and support.

- Gave leadership and six teams (People, Legal, Procurement, Support, Trust and Safety, DevOps) the options and cost analyses behind endpoint management, laptop sourcing, MDM and SSO, and advised on SOC 2 scope, AI coding tool licensing, employee monitoring, data sharing controls and the access standard for hybrid workers.
- Turned a baseline security audit of Google Workspace and Slack into the company's IT roadmap: 76 tracked actions and a 32-point due-diligence readiness checklist.
- Brought 1,000+ accounts across seven Google Workspace tenants under 2-step verification in three phased waves coordinated across teams, with a Slack tool, a support runbook and an identity-verified recovery process that unblocked locked-out external users securely.
- Automated onboarding and offboarding with a Slack app connected to Ashby, Rippling and Linear: hiring and termination events open linked IT tickets and notify the right channels without manual entry.
- Put new company Macs under device management automatically by taking over Apple Business Manager and reconnecting it to the MDM.
- Wrote the security improvement plan (SOC 2, device management, policies, security awareness training) and answered the IT side of customer security reviews.
- Set up IT request and project tracking in Linear.
- Ran the day-to-day IT queue: access, account, mailbox and device requests across Google Workspace, Slack, Bitwarden, Zendesk, Dropbox, Coda and Linear.

Skills: GAM, Google Apps Script, MFA, IAM, Identity lifecycle, Automation, AI agents, Vendor management

IT Operations Specialist | Smarter Sorting
Jan 2024 - Jan 2025 | Boulder, Colorado, US | Remote | Full-time

Built and ran the company's IT function as its only IT engineer.

- Ran frontline support and the full identity lifecycle for 100+ users across 30+ systems.
- Ended manual account provisioning by integrating Okta with the HR platform and the password manager; administered Okta SSO, Google Workspace, Jira Service Management and the device fleet on Jamf and SentinelOne.
- Defined the service-desk model and automated it in Jira: response and resolution targets by request type, escalation paths, tickets opened from Slack, and onboarding and offboarding workflows that record proof of account deactivation for audit.
- Supported the company's first SOC 2 Type 2 certification.
- Owned repository security and Google Cloud IAM governance: enforced merge-blocking rules for unresolved security alerts across 16 repositories in two days, and moved 32 individual access grants to a group-based model.
- Replaced Finance's manual month-end reporting with a Stripe integration that also surfaced 1,496 records the manual process had been missing.

Skills: Stripe API, Retool, Proofpoint, GitHub, Automation

PL/SQL Analyst | GB Agritech
Mar 2025 - Oct 2025 | Vitória, Espírito Santo, Brazil | Hybrid | Contract

Support for an ERP built on Oracle Forms.

- L3 support for escalated incidents on an Oracle Forms ERP, plus requirements analysis.
- Analysis of Oracle database functions and routines in PL/SQL.
- Improved support processes; maintained agile workflows in Azure DevOps.

Skills: Incident response, ITSM

Senior IT Engineer | TheGuarantors
Apr 2025 - Jul 2025 | New York City, US | Remote | Full-time

Led the IT team.

- Owned user lifecycle, access control, automation and process documentation, all on the existing tooling rather than adding new platforms.
- Worked with Security, HR and Infrastructure to tighten security protocols and unblock critical operational issues.
- Optimized Okta, Jira, Google Workspace, Slack and Rippling; built API integrations in JavaScript, Bash and Python.

Skills: Team leadership, REST APIs

Internal IT Support | Trustly
Apr 2022 - Jan 2024 | Vitória, Espírito Santo, Brazil | On-site | Full-time

- Bilingual (Portuguese/English) technical support for users across every US time zone.
- Ran user requests, asset management and onboarding/offboarding, and improved the internal IT processes.
- Built automation for IT tasks that cut response times.
- Led improvements in inventory control, vendor relations and security policy rollout.

Skills: IT Service Management, User lifecycle, Okta, Google Workspace, GAM, Jamf, MDM, Apple devices, Jira, Vendor management

Software Support Analyst | Quality WebPosto
Mar 2021 - Apr 2022 | Vila Velha, Espírito Santo, Brazil | Hybrid | Full-time

- Led the support team and trained new hires and interns; ran incident response, turned requests into use cases for the development team and administered the PostgreSQL databases.

Skills: Incident management, Team leadership, ERP, Training & mentoring

NOC Analyst | Algar Tech
Apr 2020 - Feb 2021 | Vitória, Espírito Santo, Brazil | Remote | Full-time

- Bilingual network analyst for VALE S/A, supporting operations in 27 countries across mesh, LTE and radio networks, BGP, MPLS, DMVPN and Cisco, with CA Spectrum and BMC Remedy.

Skills: NOC, ITIL, Incident management

Software Support Analyst | Prosystem
Oct 2017 - Apr 2020 | Vitória, Espírito Santo, Brazil | Hybrid | Full-time

- ERP support, incident management and customer service, with incident analysis and improvement requests for the development team; MySQL administration and Windows network support.

Skills: ITIL, Customer support, Windows networks

Service Desk Technician | Hsibrasil Soluções Corporativas em TI
Sep 2015 - Oct 2017 | Vila Velha, Espírito Santo, Brazil | On-site | Full-time

- Windows, networks, CCTV and IT operations support for corporate and individual clients.

Skills: Service desk, ITIL

Earlier experience
Head of Operations | Ronicar Tecnologia Automotiva | Dec 2012 - May 2015

IT Instructor | Prepara Cursos, Viaensino, Microcamp Tecnologia | May 2011 - Dec 2012

Technical Assistant | Automa Comércio e Serviços | Dec 2010 - Jul 2011

PROJECTS

Tibbis | CTO and co-founder | tibbis.com.br
Co-founder and CTO of a Brazilian marketplace for hiring local freelancers: PIX payment released when the job closes, identity verification with document OCR and face matching, real-time chat, disputes and ratings. Next.js, Supabase and Cloud Run, in production on Vercel.

Skills: TypeScript, PostgreSQL

Encontre um Terapeuta | Designer and developer | 2024 - 2025 | encontreumterapeuta.com
Therapist directory designed and built on WordPress with WooCommerce, Elementor and HivePress: location-based search, messages between patients and therapists, reviews, a blog, and online payments through Asaas (PIX, boleto and card) and Stripe. Another person manages the site today.

SKILLS

Cloud and infrastructure: Google Cloud Platform, Cloud Run, GKE / Kubernetes, Cloud SQL, IAM and Workload Identity Federation, Terraform, Helm, Docker, FinOps

Data: BigQuery, Snowflake, PostgreSQL, Oracle PL/SQL, MySQL, Datastream (CDC), ETL pipelines, Tableau

Languages and scripting: Python, SQL, Bash, JavaScript / TypeScript, PowerShell, REST APIs

CI/CD and observability: CircleCI, GitHub Actions, Datadog, Cloud Logging

AI engineering: Claude and coding agents, Vertex AI, Agentic workflow design, AI access governance (WIF over static keys)

Identity and security: Okta, Auth0, Google Workspace, Jamf, SentinelOne, SOC 2, Incident response

Service management: Jira Service Management, SLA design, Escalation processes, Technical documentation

EDUCATION

Coursework toward BSc Software Engineering | UNOPAR, Brazil | 2021 - 2024

AWARDS

3rd place, Google Cloud Data Analytics Mentor-Led Hackathon | Google Cloud | Dec 2025

Two-person team; built an automated per-customer cloud cost allocation engine in a three-week sprint with Google mentors.

LANGUAGES

Portuguese (Native), English (Fluent, professional working proficiency), Spanish (Basic)
